Changing GlobalProtect to SMPH VPN (Mac)

This page was moved to kb.wisc.edu/134108
Click in the link above if you are not automatically redirected in 10 seconds.

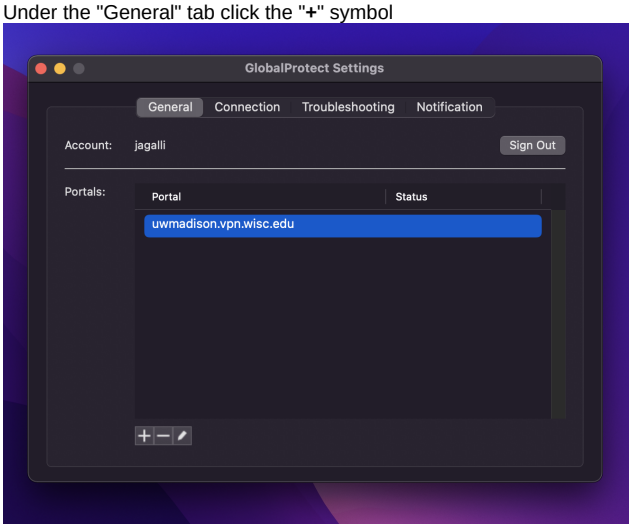

This article covers how to add the SMPH VPN Gateway to GlobalProtect on your Mac. You can use this as an alternative to uwmadison.vpn.wisc.edu for potential better performance and IT management.

Step-by-step guide

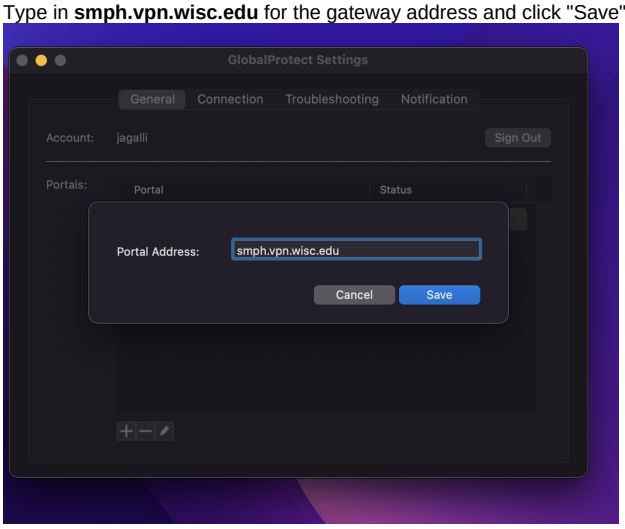

1. Open the GlobalProtect icon on your Apple Toolbar, and click on the three horizontal lines, followed by "Settings"

2. Under the "General" tab click the "**+**" symbol

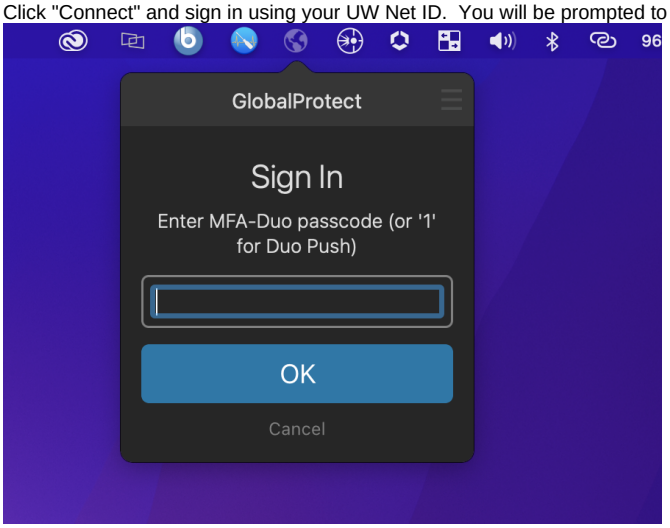

3. Type in **smph.vpn.wisc.edu** for the gateway address and click "Save"

4. Close out of the window, and then click back on the GlobalProtect icon. You should now see a portal menu, click the dropdown menu and select the **smph.vpn.wisc.edu** entry.

5. Click "Connect" and sign in using your UW Net ID. You will be prompted to enter a "1" for a DUO push to your phone or FOB device.

6. The VPN should now show connected.
