

GlobalProtect VPN - Switching to the SMPH VPN Portal (Windows OS)

This page was moved to kb.wisc.edu/134306
Click in the link above if you are not automatically redirected in 10 seconds.

Note: Before attempting to switch from the Campus VPN portal, to the SMPH VPN portal. Confirm with SMPH Shared Services IT (support@med.wisc.edu) that your NetID has been enabled for access.

Most staff machines should have GlobalProtect already installed. After logging into GlobalProtect, run any updates that prompt. It's best to have the latest version. When GlobalProtect has completed the update, you will need to re-login.

Step-by-step guide

- In your taskbar, click "Show hidden icons" (up arrow symbol) then select GlobalProtect (*white earth globe icon*).

- Click the sandwich menu (3 dashes upper right corner), then choose **Settings**.

- In the General tab, click the **Add** button, enter the new portal **smph.vpn.wisc.edu**, then **Save**.

- After adding the new portal, close out the GlobalProtect Settings window.
- Reopen GlobalProtect (*from the taskbar*). Under the **Portal** section, click the dropdown menu and choose **smph.vpn.wisc.edu**.

- After logging in, you should now be connected to the new SMPH VPN portal.
