Click in the link above if you are not automatically redirected in 10 seconds.

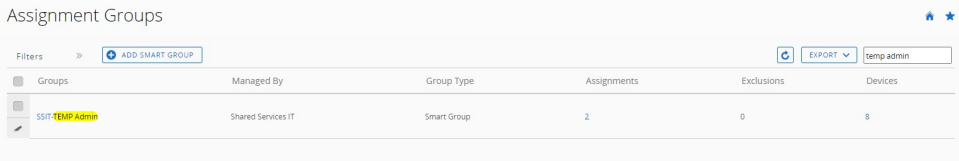

Use this guide for adding a computer to the temporary administrator privileges for Mac computers. Once this process is complete, this allows an end user to enable temp admin through intelligent hub (not Manifest) to elevate privileges on their Mac. See these instructions for the end user's side: https://confluence.med.wisc.edu/x/DoDjAg)

Step-by-step guide

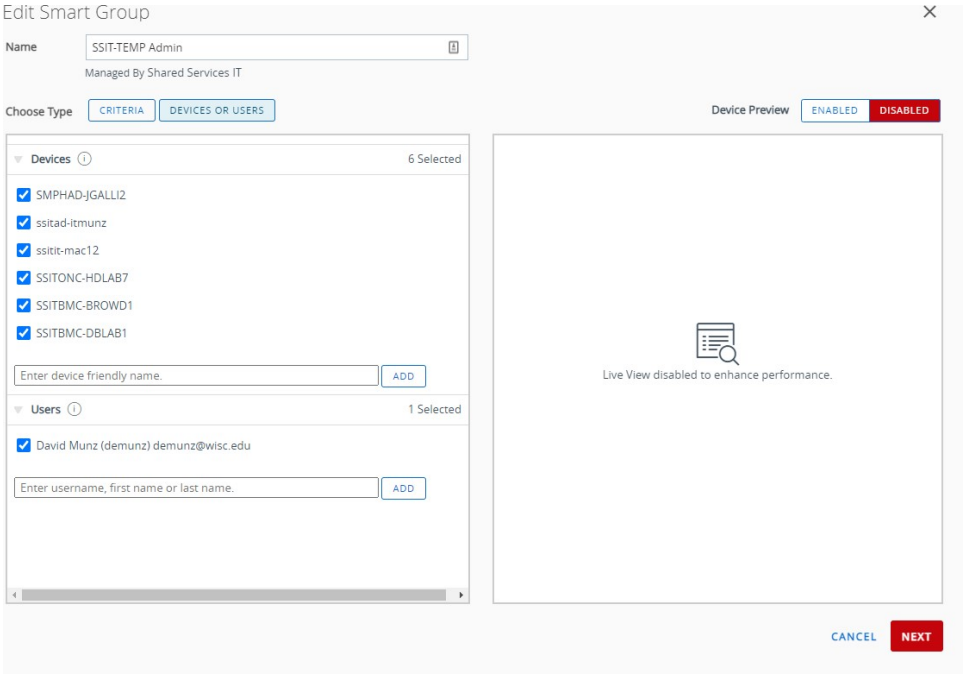

1. Sign into Workspace ONE server https://mdm.wisc.edu using Username: AD\netID
    a. Navigate to *(bottom of side menu)* **GROUPS & SETTINGS** > **Groups** > **Assignment Groups**

WISCONSIN

Organization Groups
User Groups
Assignment Groups
App Groups
Admin Groups
All Settings
Configurations

2. Search the list for "temp admin". Click on **SSIT-TEMP Admin**

3. Scroll down to the bottom of the list. Under "Enter device friendly name." type in the computer name, and click **ADD**. (Note: the device must already be enrolled in MDM)
    a. Click **Next**, then select **Publish**. (Note: changes should sync to the client usually within 15 minutes)
